

FGC Evening Service

Weekday evening, 20:00–24:00

Prepared for the transport authority

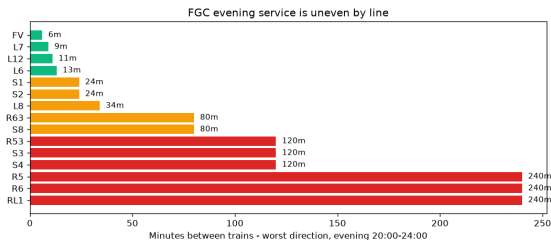

Evening service is uneven

Riders on the thinner-served lines wait far longer for a train than riders on the core network.

The gap is large

The best line runs every 6 minutes; the worst waits 240 minutes between trains - 40 times longer.

$$\frac{240}{6} = 40\times$$

Six lines are barely served

R53, S3, S4, R5, R6 and RL1 wait two hours or more between evening trains.

The imbalance is structural

The best line runs 20 trains an hour; the worst runs one every two hours.

Recommendation

Add evening trips on the lines waiting two hours or more, then re-check after the next timetable change.
